

FOR IMMEDIATE RELEASE

***INNOVATIVE! BREAKTHROUGH TECHNOLOGY TO FREEZE AWAY BODY FAT
NON-INVASIVE, TARGETS FAT CELLS ONLY WITHOUT TISSUE DAMAGE OR
DOWN TIME***

Aired on Dr. Oz Nation Wide October 19th, 2011

BENEFITS:

More cost effective than Liposuction or any other surgical fat reduction procedures with visible, lasting results

Safe, more permanent, gentle and affordable

Treat targeted areas only

Results seen in as early as three weeks and continues reducing fat up to 120 days after the procedure

Works naturally with your body's metabolism – frozen fat is broken down and assimilated naturally

Ideal for reducing those last few pounds that you just can't seem to lose with exercise and diet

Keep Grand Junction moving forward with world class medical services, including the newly available cool sculpting

No need to travel out of town – come see us at Le MedSpa today!

Be Among the First in Grand Junction to experience the rewards of CoolSculpting for getting rid of that unwanted fat!

CoolSculpting®, an innovative technology that freezes away unwanted fat and is now available at Le MedSpa, 2530 N 8th Street, Suite 203, Grand Junction, CO 81501 970-256-SKIN (7546)

CoolSculpting is an exciting new approach that is non-invasive and has shown significant results in clinical studies for removing fat without the potential risks and downtime of invasive procedures, I have found the procedure to be extremely effective, especially on resistant localized areas such as back fat, love handles and the isolated belly fat.

Unlike many other methods of fat reduction, CoolSculpting involves no needles, surgery or downtime. During the procedure, a non-invasive applicator delivers precisely controlled cooling to the treatment area thereby specifically targeting fat. Treatments last between one to two hours. Patients can have additional procedures for more pronounced effects if they desire. On average, each CoolSculpting procedure results in an undeniable reduction of fat in the treated area, and

patients can start to see results as soon as three weeks following treatment, with the most dramatic results occurring over a period of two to four months in most patients.

Cleared by the U.S. Food and Drug Administration (FDA), CoolSculpting gently cools unwanted fat cells in the body thereby inducing a natural, controlled elimination of fat cells. Based on science developed by the Wellman Center for Photomedicine at Massachusetts General Hospital in Boston, Mass., in the United States, this breakthrough is based on a vast body of research that demonstrates that fat cells are more susceptible to cold and are selectively, painlessly and permanently destroyed. Starting several weeks after the procedure, cooled fat cells begin a process called “apoptosis” and begin to shrink and disappear. The body proceeds to naturally and gradually eliminate the cooled fat cells, reducing the thickness of the fat layer.

“I have never had a surgery performed in my lifetime and I wanted to reduce my belly fat but was afraid of procedures like liposuction. Coolsculpting has given me the results I wanted and all I had to do was sit there! The machine did the rest! I’m impressed with my results – particularly for a non-invasive treatment. Within several weeks of my treatment, I noticed the fat around the treated area lessened considerably and my clothes fit so much better. My husband even noticed that my belly was flatter. I highly recommend CoolSculpting, especially for people who have stubborn body fat that diet and exercise alone do not seem to help.”

Kim

About Le MedSpa, anti-aging skin care and laser center

Whether we are addressing your skin needs or relaxing you with our luxurious spa treatments, our top priority is to ensure that your experience with us is second to none. We believe in the importance of patient education and promise to keep you thoroughly informed of your treatment options and progress.
